OVERVIEW

Professional summary

I'm a Software Engineer with a strong backend focus, specializing in building scalable, maintainable, and high-performance systems. My work goes beyond coding, I focus on system design, product thinking, and leveraging AI to accelerate development. I actively use AI-assisted workflows to design PRDs, define technical specifications, and build systems using modern architectures such as RAG (Retrieval-Augmented Generation) and MCP-based approaches. On the backend, I work primarily with Kotlin (Ktor) and Java (Spring Boot), designing robust APIs and scalable architectures. I also have solid experience with Laravel, allowing me to operate across different backend ecosystems when needed. On the frontend, I use Vue.js and TypeScript to create clean, responsive, and well-structured interfaces, always focusing on maintainability and user experience. I prioritize clean architecture, design patterns, and long-term scalability. I'm particularly interested in building systems that are not only functional, but also elegant and thoughtfully designed. Currently, I work remotely as a contractor, contributing to production systems and collaborating with teams to continuously improve product quality and performance. Beyond my professional work, I'm building my own SaaS products and exploring applied AI, focusing on how intelligent systems can enhance productivity, discipline, and decision-making. Core skills: Backend: Kotlin (Ktor), Java (Spring Boot), Laravel. Frontend: Vue.js, TypeScript. Systems: REST APIs, Scalable Architectures, System Design. AI: RAG, MCPs, AI-Assisted Development, PRDs & Tech Specs.

Professional experience

PUZL Place

Belo Horizonte, MG · São Paulo, SP

Fullstack Software Engineer (Backend-Focused) |Vuejs, TypeScript & Laravel

September 2025 - Present

Working as a Fullstack Software Engineer with a strong focus on building scalable and maintainable web applications. My role involves developing and maintaining both frontend and backend systems, ensuring performance, usability, and clean architecture across the entire application. On the frontend, I work primarily with Vue.js and TypeScript, creating dynamic, responsive, and well-structured user interfaces. I focus on componentization, code quality, and delivering smooth user experiences. On the backend, I work with Laravel, building robust APIs and business logic, following best practices and design patterns to ensure scalability and long-term maintainability. I actively apply software architecture principles and continuously improve code structure and system design. I also leverage AI-assisted development to accelerate workflows, improve code quality, and support decision-making during development.

- Development of scalable web applications using Vue.js, TypeScript, and Laravel
- Implementation of reusable components and maintainable frontend architecture
- Backend API development and business logic structuring
- Application of design patterns and clean architecture principles
- Continuous improvement of system performance and code quality

SKILLS

Top skills

Artificial Intelligence (AI)

Computer Assisted Coding Software

Kotlin

CREDENTIALS

Certifications

Aplicações completas e escaláveis com Node.js

Software Engineer (Vue.js & Laravel)

April 2023 - Present

Started as a Software Engineer working on web development for a complex ERP platform focused on the concrete industry, covering financial operations, logistics, and industrial processes.

- Developed and maintained web applications using Vue.js and Laravel
- Contributed to a large-scale ERP system supporting end-to-end operations, including financial management, load control, and scale automation
- Implemented and maintained integrations with banking systems, including real-time account management and OFX import processing
- Worked on features related to financial workflows, data processing, and operational efficiency
- Collaborated with the team to improve system architecture, performance, and maintainability
- Gained experience working with complex business rules and enterprise-level systems

Self-employed

Paranaguá, PR

Freelance Software Engineer

April 2023 - June 2023

Worked as a freelance software engineer, delivering web and mobile solutions for companies and business clients.

- Developed custom web applications using Vue.js and Laravel, focusing on scalability and performance
- Built mobile applications using Kotlin, ensuring reliability and smooth user experience
- Designed and implemented backend services and APIs using Java and PHP
- Delivered end-to-end solutions, from requirements gathering to deployment
- Collaborated directly with clients, including larger companies, to understand business needs and deliver tailored solutions
- Applied agile development practices to ensure fast and efficient delivery

Grupo Telecon RS

Rio Grande do Sul, Brazil

Software Engineer (Mobile & Web)

January 2022 - April 2023

Worked on the development and maintenance of mobile and web applications for retail systems, focused on supermarket sales operations.

- Developed and maintained Android applications using Kotlin, implementing new features, bug fixes, and performance improvements
- Worked on a web application using Angular, contributing mainly to frontend development and feature implementation
- Participated in the development of a complete retail system used for sales and operational management
- Integrated applications with backend services and APIs, ensuring data consistency across platforms
- Collaborated with cross-functional teams using agile methodologies and tools such as Trello
- Gained experience in system architecture, API design, and business logic related to retail operations

MPS Informática Ltda

Curitiba, PR

Mobile Engineer

March 2021 - January 2022

Focused on mobile application development, working with native iOS and Android technologies.

- Developed and maintained iOS applications using Swift and Objective-C
- Developed Android applications using Kotlin, focusing on performance and reliability
- Implemented new features, bug fixes, and performance improvements across mobile platforms
- Integrated mobile applications with backend services and APIs
- Collaborated with the team to improve app stability, usability, and overall user experience

Genesis Company Brasil

Florianópolis, SC

Full Stack Engineer

November 2020 – March 2021

Worked on the development of ERP systems and mobile applications, focusing on solutions for the hospitality industry and on-demand services.

- Developed and maintained ERP systems for hotel management, including modules for operations, data management, and integrations
- Contributed to the development of a ride-hailing and delivery application, similar to Uber, handling core features and system logic
- Built and maintained backend services and APIs using Laravel and PHP
- Developed web interfaces using Vue.js, focusing on usability and performance
- Developed mobile applications using Kotlin, ensuring smooth user experience and reliability
- Collaborated on system architecture decisions and feature implementation across web and mobile platforms

Self-employed

Paranaguá, PR

Freelance Software Engineer

December 2018 – March 2021

Worked as a freelance software engineer, delivering custom web and mobile solutions for clients across different industries, including retail, hospitality, and local businesses.

- Designed and developed custom applications tailored to client needs, including private systems for supermarkets, hotels, and retail stores
- Built mobile applications using Kotlin, focusing on performance and usability
- Developed web applications and dashboards using Vue.js and Laravel
- Designed and implemented backend services and APIs using Java and PHP
- Delivered end-to-end solutions, from requirements gathering to deployment
- Collaborated directly with clients to understand business needs and translate them into technical solutions

AG&BM CONSTRUTORA

Paranaguá, PR

Full Stack Engineer

January 2020 - September 2020

Worked on fullstack development, contributing to web and mobile applications across different technologies.

- Gathered and analyzed requirements to support product development
- Designed and structured relational databases
- Developed web applications using Laravel and Ruby on Rails
- Built and maintained APIs to support system integrations
- Developed mobile applications using React Native and Kotlin
- Contributed to UI/UX design and interface improvements

Infotech Soluções em Tecnologia

Paranaguá, PR

Mobile & Backend Software Engineer

June 2019 - October 2019

Worked on mobile and backend development, building scalable applications and system integrations.

- Developed Android applications using Kotlin, implementing features such as QR code payments, local and remote data synchronization, and integrations with Google Maps API and Firebase
- Designed and implemented REST APIs using PHP
- Modeled and structured relational databases
- Built responsive web interfaces using HTML and CSS
- Implemented UI animations to improve user experience

EDUCATION

Education

Pontifícia Universidade Católica do Paraná

April 2025 - November 2026

postgraduate · Software Engineering, DevOps & Digital Transformation

Instituto Federal do Paraná - IFPR (Curitiba)

February 2016 - June 2019

Associate Degree in Systems Analysis and Development · Computer Technology/Computer Systems Technology
